

Course work in discipline "**Constructional materials technology of inorganic substances**" on " Absorption of nitrogen oxides with sulfuric acid "

Explanatory Note 24 p., 1 diagram, 4 links.

The physicochemical foundations of nitrous process is a flow chart of the process. Is a drawing of the technological schemes. The choice of construction materials processing equipment and vehicles. Nitrogen method, glover tower, denitration, nitrogen dioxide, absorption nitroso, tower systems, nitrous.

The main condition-tower made of ordinary steel Ст. 3 сп. They used bitumen tar board insulation as a sublayer under the lining of acid-resistant ceramic tiles and acid-resistant brick in several layers.

For a relatively low acid nitroznisty with low concentrations of sulfuric acid are useful refrigerators steel 0X21H6M2T.
