

## ANNOTATION

Course work in discipline "**Materials of construction technology of inorganic substances**" on "caustic soda"

The physicochemical foundations of the production of caustic soda, presented the process. These drawings flowsheet is the main unit.

The choice of construction materials processing equipment and machinery.

KAUSTIFIKATSIYA, SLUDGE, LIME RESIDUE, MEADOW, SODIUM HYDROXIDE, SODIUM IDKY, CAUSTISITY SODA.

For the manufacture of the cabinet, it is desirable to use a carbon steel for increased strength and hardness. To save the hopper walls against the formation of dents and erasing moving bulky solids can be used cast iron or reinforced concrete lining.
